#### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes
and/or additions be unacceptable to applicant, an amendment may be filed as provided
by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be
submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Thomas Bethea, Registration No. 53,987 on December 16, 2008.

The application has been amended as follows:

#### Claims

4. (Currently amended) A method for providing Quality of Service (QoS) to an Ethernet switching means connected to a Wide Area Network (WAN), which has at least one bandwidth limited channel, wherein a total IP data throughput of voice-, video- and/or other real time applications or services together with non-real time applications or services are provided by use of IP data packages, wherein the Ethernet switching means is logically connected to an Adaptive Quality of Service (AQS) means, comprising the steps of.

acquiring Quality of Service information carried in the RTP/RTCP data packages;

comparing at least one QoS value  $Q_n$  to a corresponding QoS acceptance ratio, wherein each  $Q_n$  is based on the Quality of Service information from the RTP/RTCP data packages;

Application/Control Number: 10/501,517

Art Unit: 2419

filtering when at least one QoS value has an unacceptable level to said corresponding QoS acceptance ratio; and

wherein the filtering is stopped, if  $\underline{a}$  used bandwidth value (TB) of the total IP throughput declines a deactivation threshold value ( $F_d$ )[[.]]; and

wherein the deactivation threshold value  $(F_d)$  is a predefined value available throughput buffer level.

7. (Currently amended) A method for providing Quality of Service (QoS) to an Ethernet switching means connected to a Wide Area Network (WAN), which has at least one bandwidth limited channel, wherein a total IP data throughput of voice-, video- and/or other real time applications or services together with non-real time applications or services are provided by use of IP data packages, wherein the Ethernet switching means is logically connected to an Adaptive Quality of Service (AQS) means, comprising the steps of:

acquiring Quality of Service information carried in the RTP/RTCP data packages;

comparing at least one QoS value  $Q_n$  to a corresponding QoS acceptance ratio, wherein each  $Q_n$  is based on the Quality of Service information from the RTP/RTCP data packages:

filtering when at least one QoS value has an unacceptable level to said corresponding QoS acceptance ratio;

Application/Control Number: 10/501,517 Page 4

Art Unit: 2419

further comprising the steps of setting  $\frac{1}{2}$  a controlling means in either of two operation modes:

a first mode - Simple mode - when at least one of the QoS values is found to be not acceptable. ef and

a second mode - Advanced mode - when all QoS values are found to be not acceptable.

## 8. (Canceled)

33. (Currently amended) A computer program product having computer readable program code stored on a computer useable medium for providing Quality of Service (QoS) to an Ethernet switching means that is connected to a Wide Area Network (WAN), which has at least one bandwidth limited channel, wherein a total IP data throughput of voice-, video- and/or other real time applications or services together with non-realtime applications or services are provided by use of IP data packages, wherein the Ethernet switching means is logically connected to an Adaptive Quality of Service (AQS) means, the computer readable program code comprises code for:

acquiring Quality of Service information carried in the RTP/RTCP data packages;

comparing at least one QoS value  $Q_n$  to a corresponding QoS acceptance ratio, wherein each  $Q_n$  is based on the Quality of Service information from the RTP/RTCP data packages;

Application/Control Number: 10/501,517

Art Unit: 2419

filtering when at least one QoS value has an unacceptable level to said corresponding QoS acceptance ratio; and

wherein the filtering is stopped, if  $\underline{a}$  used bandwidth value (TB) of the total IP throughput declines a deactivation threshold value (F<sub>d</sub>)[[.]]; and

wherein the deactivation threshold value  $(F_d)$  is a predefined value available throughput buffer level.

36. (Currently amended) A computer program product having computer readable program code stored on a computer useable medium for providing Quality of Service (QoS) to an Ethernet switching means that is connected to a Wide Area Network (WAN), which has at least one bandwidth limited channel, wherein a total IP data throughput of voice-, video- and/or other real time applications or services together with non-realtime applications or services are provided by use of IP data packages, wherein the Ethernet switching means is logically connected to an Adaptive Quality of Service (AQS) means, the computer readable program code comprises code for:

acquiring Quality of Service information carried in the RTP/RTCP data packages;

comparing at least one QoS value  $Q_n$  to a corresponding QoS acceptance ratio, wherein each  $Q_n$  is based on the Quality of Service information from the RTP/RTCP data packages:

filtering when at least one QoS value has an unacceptable level to said corresponding QoS acceptance ratio;

further comprising program code for setting the  $\underline{a}$  controlling means in either of two operation modes:

a first mode - Simple mode - when at least one of the QoS values is found to be not acceptable, and

a second mode - Advanced mode - when all QoS values are found to be not acceptable.

## Specification, Page 26 1st Paragraph

The method is implemented by means of a computer program product comprising the software code means for performing the steps of the method.

The processing unit of the computer means runs the computer program product.

The computer program product is loaded directly or indirectly from a computer usable medium, such as a floppy disc, a CD, ROM, PROM, EEPROM, or the Internet etc.

## Allowable Subject Matter

2. Claims 2, 4, 7, 10, 12, 31, 33, 36, 39, and41 allowed.

3. The following is an examiner's statement of reasons for allowance: the prior art of record does not teach or adequately suggest the claimed invention. Specifically, the prior art of record does not teach or suggest the filtering steps of claims 4 and 33, wherein the filtering is performed it the used bandwidth value declines a deactivation threshold value, wherein the deactivation threshold value is a predefined value available throughput buffer level. The prior art of record also does not teach or adequately suggest the elements of claims 7 and 36 where two modes of operation (Simple mode - at least one of the QoS values is found to be not acceptable, and Advanced mode - when all QoS values are found to be not acceptable) are implemented by a controlling means in the Ethernet switching means.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
